

QIP 2022 / 23

1. Percentage of residents with PAIN identified in their care plan have at least two non-pharmacological interventions identified and have had an assessment as to the indication for pharmacological intervention.

Reasons for Improvement:

- Currently JMPC is higher than the provincial benchmark for residents with worsened pain.

CIHI Data for JMPC = September 2021 – 14.6%

Provincial Data = September 2021 - 9.4%

Target for July 2023 = 9.4%

Update: Dec 2022 = 14.5%

2. Continuous reduction in percentage of LTC residents without psychosis who were given antipsychotic medication in the 7 days preceding their resident assessment.

Reasons for Improvement:

- Currently JMPC is doing great work in this important area and we want to maintain our momentum of this initiative.

CIHI Data for JMPC = September 2021 – 12.3%

Provincial Data = 19.5%

Target for July 2023 = Ongoing monitoring to stay below the provincial data mark.

Update: Dec 2022 = 15.6%

3. Improve staff experience and work life balance using the SSC program by increasing the successful granting of annual vacation requests **from 85% (current status) to at least 90%** of full time staffs annual vacation requests (1st, 2nd and 3rd choices) and increase the granting of part time annual vacation requests by 5% **from 21% in 2022 to 26% in 2023.**

Reasons for Improvement:

- Scheduling is an ongoing concern in staff satisfaction surveys
- Staff share that scheduling contributes significantly to the morale of the staff.

Update: Annual Requests

FT – 89% PT- 63%

4. Increase resident experience with their satisfaction and engagement of the recreation programs at JMPC as outlined in our annual resident satisfaction survey questions (Q 5, 37-43) by **5% in each question.**

Reasons for Improvement:

- All of the noted questions outlined were in the 70-79% range.

Update: No update until fall resident survey

5. Reduce the number of residents identified through CIHI with worsened ADL's (activities of daily living).

Reasons for Improvement:

- CIHI Data for JMPC = September 2021 – 40.1%
- Provincial Data = 33.1%
- **Target for July 2023 = 30%**

Update: Dec 2022 = 35.1%

(Note: CIHI stands for Canadian Institute for Health Information)
